

# QUICK CONNECTORS

NO STRIPPING — NO SOLDERING — TERMINATE IN SECONDS

FOR **2 FLAT** AND **4 FLAT** SPEAKER CABLE

The custom install market is a substantial, yet largely underserved segment of the hifi cable industry. While the demand for custom installation may be high, the quality of products available often doesn't match that of pre-terminated cables. In the rare case where the cable quality meets the system's requirements, the installation of the cable itself can be an unwieldy, frustrating, and time-consuming endeavor. Now, by using Nordost's new Quick Connectors with the reputable and time-tested 2 Flat and 4 Flat Leifstyle Speaker Cables, installation will be transformed into a fast, easy, and **solder-free** way to achieve a stellar sounding system.

Nordost's Quick Connector Starter Kit is comprised of four essential elements that will completely revolutionize custom cable installation: 1 slitting tool, 24 Z-plug banana Quick Connectors, 24 boots (12 red + 12 black), and 1 crimping tool. Nordost's new, custom-made cable splitter is designed specifically for both 2 Flat and 4 Flat Cables, allowing you cut a clean and precise break-out at any length, by

simply sliding your cable into the slitter, squeezing down on the tool, and pulling the cable through. With the Quick Connector Slitting Tool, your cable will be prepared for termination, in either a shotgun or bi-wire/bi-amp configuration, in just a few short seconds. Once ready to terminate, simply slip on one of the provided vinyl boots, followed by one of our innovative Z-plug Quick Connectors. Clamp down on the designated, raised section of the Quick Connector with the crimping tool, and pull up the boot to cover the black Kynar portion of the connector. In less than one minute, your terminated cable is ready to install. No stripping, heat gun, or soldering iron required!

The Quick Connector System can be used interchangeably with either Nordost 2 Flat, or 4 Flat Speaker Cables. 2 Flat and 4 Flat are the longest standing lines of Nordost cable offerings. They are comprised respectively of 2 or 4 rectangular, solid core, oxygen-free copper conductors, and use Nordost's proprietary FEP extrusion technique, which ensures the low inductance and capacitance necessary of high quality audio cables. The low signal loss of 2 Flat and 4 Flat cables makes them ideal for both hifi, and home theater applications, where long runs of cabling are required to be discrete, yet offer high performance. In fact, the extreme durability and thin construction of these cables makes them the natural choice when facing an installation that calls for placement under carpets or baseboards.

Nordost Quick Connectors now provide everything you need to make custom cable installation an effortless and speedy process. Quick Connectors will save you time and frustration with every job, while still ensuring the outstanding audible results that your customers expect from Nordost cabling.
